

**S3 Fig. Annexin V did not affect the induced TF activity of histone-stimulated cells.**

EA.hy926 cells were stimulated with or without 50  $\mu\text{g/mL}$  histones for 4 h, then incubated with PBS or 10  $\mu\text{g/mL}$  annexin V for 15 min. The TF activity was analyzed using a procoagulant assay. \*  $P < 0.05$  vs. control (histones not treated).
